

1 Conclusion

1.1 Future Work

1.2 extrapolate for other non-native languages

A number of other programming languages such as Visual Basic (.NET) and C# use similar a virtual machine just like Java to make them portable to other machines. This gives the opportunity to extrapolate certain high-level implementation details and apply them to other non-native programming languages, allowing for other application not written in Java to take advantage of fast non-native packet processing.
